

## Tidal flooding alert for the Indian coastline

There is a possibility of flooding in the low lying coastal areas, especially during high tide timings due to the perigean spring tides, for the period April 12-13, 2020. Sustained strong onshore winds, high near shore waves/swells & heavy rainfall and associated discharge can cause nuisance flooding (public inconveniences) especially at high tide times along low lying coastal areas.

**Table.** Approximate timings of the Higher High Water and Lower High Water for the period April 12-13, 2020, when there is a possibility of nuisance flooding caused by the spring tides.
